**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. It is unclear whether the "minimum threshold value" recited in lines 8 and 13 is the same as or different from the "minimum threshold voltage" recited in line 2. Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 9, as best understood in view of the rejection under 35 U.S.C. 112, second paragraph, above, is rejected under 35 U.S.C. 103(a) as being anticipated by Zarubinsky et al. (U.S. Patent Application Publication 2002/0114413 A1) in view of Edison et al. (US 6,242,975).

As to claim 9, the Zarubinsky reference discloses a method of setting signal levels of in-phase and quadrature phase components of a radio receiver between a minimum threshold voltage and a maximum threshold voltage, the method including setting the gain of an automatic

gain control, increasing the gain of the automatic gain control stage by a predetermined amount and repeating these steps until the signal levels of the in-phase and quadrature phase components are greater than or equal to the predetermined minimum threshold value (see page 2, col. 1, paragraphs [0028], [0030], [0031]; and page 5, col. 2, paragraphs [0089] to [0092]).

Zarubinsky fails to disclose setting the gain to a value at which the signal levels of the in phase and quadrature phase components are less than or equal to the maximum threshold voltage, and comparing the signal levels of the in-phase and quadrature phase components to a predetermined minimum threshold value.

However, in an analogous art, Edison discloses an amplifier in which a gain to a value at which the signal levels of the in phase and quadrature phase components are less than or equal to the maximum threshold voltage, and comparing the signal levels of the in-phase and quadrature phase components to a predetermined minimum threshold value. See FIGS. 1, 2 and 9, Abstract, col. 3, lines 42-52 and col. 4, lines 12-28. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method in Zarubinsky by including the above-noted features taught in Edison for the purpose of fine tuning the levels of the in phase and quadrature phase components to desired values.

***Allowable Subject Matter***

6. Claims 2-8 and 10 are allowed.
7. The following is a statement of reasons for the indication of allowable subject matter: claims 2-8 and 10 are allowed for the reasons stated in the previous Office action.

***Response to Arguments***

8. Applicant's arguments with respect to claim 9 have been considered but are moot in view of the new ground(s) of rejection.
